

The Element That "Matters"

LAWRENCIUM

**Let's Begin!**

**Lawrencium  
is an  
Element  
created by  
the Soviet  
Union in  
Russia, who  
soon gave  
America  
credit in  
1960.**

**It was discovered by Ernest Lawrence, a guy who discovered a lot of other elements as well.**

**Ernest  
Lawrence**

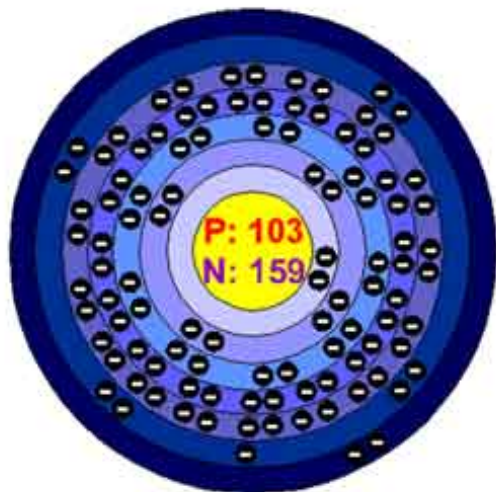

Lawrencium is an element that cannot be naturally produced but is created by man, which I already said, but just clarifying things up for you. It usually appears to the human eye as a metal.

Lawrencium is a  
radioactive actinide.

This atom model is basically exactly what I'm saying, so if you hate reading, just look at the photo.

Number of Energy Levels: 7  
First Energy Level: 2  
Second Energy Level: 8  
Third Energy Level: 18  
Fourth Energy Level: 32  
Fifth Energy Level: 32  
Sixth Energy Level: 9  
Seventh Energy Level: 2

**Name: Lawrencium**

**Atomic #: 103**

**Protons: 103**

**Neutrons: 159**

**Electrons: 103**

**Shells: 7**

**Valence Electrons: 3**

Лоуренсий  
является  
элементом,  
который  
мы делаем!

Is what  
the  
Soviet  
union  
said  
when  
they  
were  
first  
making  
Lawrencium!

*were there any  
questions I didn't  
answer for you? If so,  
be sure to ask them in  
the comments!*

THE END!
